- 1. To go from a complex application to the simple low-level instructions involves several layers of software that are organized primarily in a hierarchical fashion as shown in the following figure.
- a) Can you name a few examples of applications software?
- b) Can you name a few examples of operating system?
- c) Do you know why most of applications are platform dependent? E.g., an iPhone Apps can only work on iPhones while Android Apps can only work on Android devices.

- 2. What are the interfaces available for users to interact with operating systems? What is the difference between user interface and programming interface to interact with the operating system?
- 3. Why do you (a CS/EE student) need to learn OS?

There is no definite answer but

- Do you think the end users (users of computer applications) would like to concern with the details of computer hardware before they could use the software?
- O Do you think the application programmers (who develop computer applications with programming languages) would like to write programs as a set of machine instructions that is completely responsible for controlling the computer hardware?
- O Do you think you will be a system programmer?
- o Do you think you will be an OS designer?

## Self-test

Choose the best answer.

- 1) The four main structural elements of a computer system are:
  - A. Processor, Registers, I/O Modules & Main Memory
  - B. Processor, Registers, Main Memory & System Bus
  - C. Processor, Main Memory, I/O Modules & System Bus
  - D. None of the above
- 2) The two basic steps used by the processor in instruction processing are:
  - A. Fetch and Instruction cycles
  - B. Instruction and Execute cycles
  - C. Fetch and Execute cycles
  - D. None of the above
- 3) A fetched instruction is normally loaded into the:
  - A. Instruction Register (IR)
  - B. Program Counter (PC)
  - C. Accumulator (AC)
  - D. None of the above
- 4) The control/status register that contains the address of the next instruction to be fetched is called the:
  - A. Instruction Register (IR)
  - B. Program Counter (PC)
  - C. Program Status Word (PSW)
  - D. All of the above
- 5) Small, fast memory located between the processor and main memory is called:
  - A. WORM memory
  - B. Cache memory
  - C. CD-RW memory
  - D. None of the above
- 6) Which of the following description is correct when comparing cache, main memory and hard disk in order?
  - A. Increasing cost per bit
  - B. Decreasing capacity
  - C. Increasing access time
  - D. All of the above
